Case Study

Cloud Practice

Financial Services

- **The Challenge**

  Customer was looking for an application log management tool to make it available to all software engineering teams within the company. Specifically, customer wanted the solution's delivery team to:

  - Assist various teams in their ingestion pipelines and dashboards
  - Define the initial setup and sizing adjustments for each internal client
  - Train the clients
  - Solve internal issues and manage vendor support

- **The Solution**

  Elastic Stack (ELK) and ElasticCloud was deployed and configured, along with integrations to a Kafka bus and a public cloud integration.

- **Results**

  Customer was able to address business and technological requirements:

  - Sizable to customer requirements
  - Easy and fast to install new supporting structures
  - Include access management normalized structure
  - Preconfigured for Data Archiving
  - Optimized for performance
  - High availability over 2-3 sites
  - Oriented towards a devops management
  - Structured for charge back
